

Citation and Referencing

All sources used in an article should be cited and presented as reference. Citation reflects professionalism in medical literature and is a way to show professional respect to the concerned scholars and their scientific work.

JKMC follows modified Vancouver system as devised in the NLM style guide for authors, editors, and publishers for referencing, which is available as a book: "Citing Medicine, 2nd edition". The book can be downloaded free of cost at: <http://www.ncbi.nlm.nih.gov/books/NBK7256/>

A complete referencing consists of:

- In-text citations using numbers
- A numbered reference list at the end of the document.

In-text Citation

Citation is done in form of Arabic numbers that correlates with the source in the reference list at the end of the document.

Following points illustrate the style JKMC follows for citing sources:

1. A number is allocated to a source in the order in which it first appears in the text. If the source is referred to again, the same number is used.
2. Citation numbers are placed in superscript format. No parenthesis is used.
3. The numbers are placed to the left of colons and semi-colons. Similarly they are placed before full-stops.
4. When multiple references are cited together, the numbers are separated by a comma. In case of more than two consecutive numbers, first and last numbers are separated by hyphen.

E.g. Similar results have been obtained in various studies^{4-7, 15}.

Reference List

Reference list is placed at the end of the document numerically in the order they are cited in the text.

A brief description along with illustrative examples of references to common publications is presented here. More detailed description is available from: <http://www.ncbi.nlm.nih.gov/books/NBK7256/>
